INTRODUCING…

AN INNOVATION IN COMFORT AND COMPLIANCE

THERAPIES. HAND IN HAND.
CONTINUOUS COMPRESSION THERAPY

is essential in the management of Chronic Venous Disorders (CVD). Research shows that consistent wear of graduated compression stockings significantly improves venous return and alleviates symptoms.

60% of patients do not wear their compression garments as prescribed.¹

Treatment with compression devices can only be effective if the patient agrees (concordance) and remains true (adherence) to the prescribed compression therapy – thus being compliant. Gradient compression improves the venous return and is the technological basis of the therapy. But only the consistent wearing of compression stockings by the patient, thus complying with the doctor’s recommendation, provides the therapeutic success.

Prof. Dr. med. Eberhard Rabe, Bonn

To help with patient compliance, compression stockings have been improved upon since originally pioneered by Conrad Jobst, and are now available in various styles, sizes and fabrications. Yet, non-compliance in prescribed compression wear continues.

As the market leader for medical compression garments, JOBST® understands the challenges patients and healthcare professionals face every day, and provides solutions to increase patient compliance for effective management of CVD.

It’s a simple equation:

- Effective CVD management + Increased comfort

Improved patient outcomes
Not All Silicone Bands Are Equal

SILICONE BAND EXAMPLE A
Continuous Coating

72% Silicone Coverage*

SILICONE BAND EXAMPLE B
Honeycomb Coating

36% Silicone Coverage

JOBST® Sensitive with
knit-in silicone band

9% Silicone Coverage

* of the stretched band

MOISTURE ABSORBENCY TEST

- JOBST® Sensitive absorbs moisture **twice as fast** compared to other silicone band compression products
- Absorbed moisture evaporates through the fine mesh of the band

Test shows time it takes the fabric to absorb one drop of water

- Non-skin side: outside
- Skin side: inside

Source: Internal lab test 10/2014; tested field of moisture absorbency in comparison to competitor products
With the lowest silicone coverage on the market, JOBST® Sensitive absorbs moisture underneath the welt twice as fast. This, in combination with a good evaporation rate, helps the patient feel more comfortable, and be more compliant.

**Effective Gradient Compression**

Gradient pressure works by providing the most compression at the ankle, where it's needed, and is lessened as it moves up the leg, to provide proper blood flow.

**Increased Comfort**

Interwoven, evenly dispersed silicone yarns in the inside of the top band help keep stockings in place. This improves moisture absorbency ability and rate, so your patients and customers can focus on enjoying the freedom that comes with improved health.

**Here’s what consumers say:**

- No imprints!
- No sweating, very comfortable!
- No noticeable pressure.

JOBST® ULTRASHEER

Sheer and lightweight, the perfect combination of fashion with effective compression therapy.

SUPERIOR QUALITY

JOBST® Advanced Comfort™, a unique blend of soft yarns and finishes, keeps you cool, dry, and comfortable. Reciprocated heel and toe provide better fit and durability.

JOBST® OPAQUE

HIGH CLASS COMFORT

A smooth, lightweight design and an ultra soft texture makes JOBST® Opaque the most comfortable stocking in its class.

EASY TO PUT ON

Donning and doffing are easier thanks to a specially integrated silicone blend softener.

DURABILITY AND GREAT FIT

Resilient yarn combined with a reciprocated heel and toe to provide greater durability and better fit.
COLORS

- Natural
- Classic Black
